A2 is a CC beta strand peptide which forms part of a beta sheet. Peptides (CC (AAY40601-Y40609) together form a single-chain scaffold protein which CC contains at least 1 disulfide bond, contains less than 10% alpha helix CC and contains at least 6 beta-strands. The scaffold protein is constructed CC functionally equivalent derivative of these sequences. The beta strands CC form two beta sheets $1/$4/$3 and $6/$5/$2 with each strand connected to CC the next by hydrogen bonds, which generate a beta sandwich architecture. CC If the additional beta strands A1-A3 are included in the structure the CC saffold is constructed of two beta strands are connected to construct the constructed of two beta strands are connected to calfold is constructed of two beta strands are connected to cother via amino acid loops, where at least one of the loops binds to a CC receptor or antigen. The scaffold protein is used to stabilize antigens CC or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold comay be bound to a protein which binds to a tumour antigen. This will the stabilize individual speptides in a peptide library and may be used in CC chemotherapeutic agents to specific cells. It may also be used to catabilize individual speptides in a peptide library and may be used in CC diagnostic techniques, and to stabilize antigens used as vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; CTLA-4; scaffold protein; antigen-binding; receptor-binding; SCA domain; cancer; thrombosis; osteoporosis, rheumatoid arthritis; diabetic retinopathy; atherosclerosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         *888888888
                       Sequences AAY40659-Y40679 are functionally equivalent derivatives of the CC A2 peptide (AAY40604) which forms part of a scaffold protein. A2 is a cC beta strand peptide which forms part of a beta sheet. Peptides CC (AAY40601-Y40609) together form a single-chain scaffold protein which CC contains at least 6 beta-strands. The scaffold protein is constructed CC of beta strands S1-S6, and may also include beta strands A1-A3, or any CC functionally equivalent derivative of these sequences. The beta strands CC form two beta sheets S1/S4/S3 and S6/S5/S2 with each strand connected to CC the next by hydrogen bonds, which generate a beta sandwich architecture. CI f the additional beta strands A1-A3 are included in the structure the CC scaffold is constructed of two beta sheets, with the structures CC A1/S1/S4/S3 and S6/S5/S2/A2/A3. The beta strands are connected to a cother via amino acid loops, where at least one of the loops binds to a CC other via amino acid loops, where at least one of the loops binds to a cother via amino acid loops, where at least one of the loops binds to a cother via amino acid loops, where at least one of the loops binds to a cother via amino acid loops, where at least one of the loops binds to a cother via amino acid loops, where at least one of the loops binds to a bound to a protein such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold crown beta sheets with the starfold mild the scaffold and the scaffold which the starfold and the scaffold which the scaffold by the scaffold protein is used to stabilize antigen of the scaffold crown because of the scaffold are the scaffold and the scaffold which the scaffold protein such as receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can used as a scaffold to bind antigen or receptor-binding fragments. T can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rhematoid arthritis and diabetic retinopathy. Sequences AAB2930-02939 were used in the proteins of the invention.

Another surface may be bound to a cytotoxic molecule or an autoimmune antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAB30008 standard; Peptide; 8 AA
                                                                                                                                                                 The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen or receptor binding fragments. These can be used in the treatment of diseases such as cancer,
                                                                                                                                                                                                                                                                          Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding
                                                                                                                                                                                                                                                                                                                                 WPI;

                                                                                                                                                                                             xx x sequences AAY40659-Y40679 are functionally equivalent derivatives of the CC A2 peptide (AAY40604) which forms part of a scaffold protein. A2 is a CC beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which CC contains at least 1 disulfide bond, contains less than 10% alpha helix CC contains at least 6 beta-strands. The scaffold protein is constructed of beta strands $1-$6, and may also include beta strands A1-A3, or any CC form two beta sheets $1/$4/$3 and $6/$5/$2 with each strand connected to the next by hydrogen bonds, which generate a beta sandwich architecture. CC If the additional beta strands A1-A3 are included in the structures scaffold is constructed of two beta sheets, with the structures the CC a1/$1/$4/$3 and $6/$5/$2/$2/A3. The beta strands are connected to other via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold may be bound to a protein which binds to a tumour antigen. This will compute the complex to tumour cells. Another surface may be bound to a cytotoxic molecule or an autoimmane antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to chamblize individual peptides in a peptide library and may be used in CC chambterspeutic agents to specific cells. It may also be used to constabilize individual peptides in a peptide library and may be used in CC diagnostic techniques, and to stabilize antigens used as vaccines.

                                                                                                                                                                                                                                                                                                                                          based upon the human CTLA-4 SCA domain. These scaffold proteins can used as a scaffold to bind antigen or receptor binding fragments. The treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen or receptor binding
             Synthetic.

The MDM2 binding peptides can specifically inhibit or block the binding of MDM2 to the human p53 protein, in vitro cor in vivo. Inhibiting the interaction between the p53 and MDM2 can conduce growth arrest or apoptosis in tumour cells comprising a wild-type p53 and non-elevated levels of MDM2. The peptides may be used to identify molecules that bind to MDM2 and to identify and design inhibitors of the MDM2, p53 binding. They may also be used to purify binding partners of especially MDM2, diagnose disease by measuring levels of MDM2 in blood concer and leukaemia patients and for treatment or prevention of cancer and leukaemia patients and for treatment or prevention of cisase involving p53,MDM2 interactions, especially tumours and viral cor by injection. By interfering with MDM2/p53 interaction, the peptides can be administered masally, rectally, orally cor by injection. By interfering with MDM2/p53 interaction, the peptides which mimle the MDM2 binding site in p53, have a significantly greater of blocking activity compared with wild-type p53.
                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                            This peptide is capable of binding to an oncogenic protein MDM2 CC (especially human DM2). The MDM2 binding peptides can specifically CC inhibit or block the binding of MDM2 to the human p53 protein, in vitro CC or in vivo. Inhibiting the interaction between the p53 and MDM2 can CC induce growth arrest or apoptosis in tumour cells comprising a wild-type CC p53 and non-elevated levels of MDM2. The peptides may be used to identify CC molecules that bind to MDM2 and to identify and design inhibitors of CC MDM2/p53 binding. They may also be used to purify binding partners CC especially MDM2 diagnose disease by measuring levels of MDM2 in blood of cancer and leukaemia patients and for treatment or prevention of CC disease involving p53/MDM2 interactions, especially tumours and viral CC or by injection. By interfering with MDM2/p53 interaction, the peptides CC can activate p53 function and accumulation in normal cells. The peptides CC which mimic the MDM2 binding site in p53, have a significantly greater very

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       neutrophils), which prevents permanent connective tissue damage associated with inflammatory conditions, Sequences AAW89733-743 and AAW30578-581 represent peptide fragments derived from human CRP. These are comparison peptides that were used along with the claimed CRP-derived peptides of the invention (AAW89722-732).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to anti-inflammatory peptides derived from hum C-reactive protein (CRP) that are capable of inhibiting in vitro enzymatic activity of human Leukocyte Elastase (hLE) and/or human Cathepsin G (hCG). The CRP peptide derivatives are useful for treatic chronic inflammatory conditions, especially rheumatoid arthritis, pulmonary emphysema, cystic fibrosis, bronchitis, but e respiratory
                                                                                                                                                                                                                                                               02-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           distress syndrome, asthma and other chronic inflammatory tissue destructive conditions. The CRP peptide derivatives significantly inhibit the enzymatic activities of his and hCG enzymes (released from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New peptide(s) derived from human C-reactive protein - useful for inhibiting, in vitro, enzymatic activity of human leukocyte elastase and/or human cathepsin G in the treatment of chronic inflammatory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of an all-D peptide suitable for CC use for preparing vaccines for preventing or treating Alzheimer's CC disease and other amyloid related disorders in humans. It is based CC are produced using 'non-self' peptides synthesised from the CC unnatural D-configuration amino acids to avoid the drawbacks of self' proteins. The all-D peptides synthesised to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid protein, e.g. the beta-sheet region CC configurative or immunogenic, protein, the amyloid-beta peptide, or their immunogenic freguents, protein conjugates, immunogenic derivative peptides and immunogenic peptidomimetics. Examples include all D peptides corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, CC 10-16, 16-21 and 36-42 of the amyloid-beta peptide and the all-D peptides corresponding to residues 1-42. The vaccine elicits a CC peptides corresponding to residues 1-42. The vaccine elicits a CC preferential TH-2 or TH-1 response, preventing fibrillogenessis and CC preferential TH-2 or TH-1 response, preventing fibrillogenessis and CC preferential TH-2 or tracketty. The amyloid related diseases may be coalseed amyloidosis, e.g. dishetes type II, neurodegenerative diseases, scrapte, cerebral amyloid angiopathy, and prion protein related disorders, or systemic amyloidosis associated with chronic infeatured, e.g. therefore end or chronic inflammation (e.g. therefore)

                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a method of producing a chemical sensor, CC involving the use of microjet technology to print one or more indicator chemistries on an optically accessible surface. This is useful for chemistries on an optically accessible surface. This is useful for common producing a chemical sensor useful for detecting and/or analysing a casmple in a fluid or airborne medium, for monitoring hazardous materials such as heavy metals, hydrocarbons and chlorinated hydrocarbons in both consisted by the production of the product of sample metals of hazardous materials, such as carcinogens or mutagens present in hostile or potentially hostile environments. The sensor systems can be implemented in assembly line type configurations for quality and process control type applications, e.g. measurements of gases emitted from fruits and vegetables and detection of contaminants in soft drink or bottled water solutions. The systems are used for detection of airborne or water-based chemical and blowarfare agents such as anthrax and are suitable for measuring multiple constituents in a small sample volume. The present sequence is a substrate for a matrix metalloproteinase described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 activity. The drug conjugate is seein for alleviating a pathological condition such as antibacterial; nephrotropic; and immunomodulatory activity. The drug conjugate is useful for alleviating a pathological condition such as neoplastic diseases, chronic inflammatory diseases acute inflammatory diseases, cardiac diseases, renal diseases, liver diseases, lung diseases, neurological diseases, musculoskeletal diseases modulating immunological or hormonal function. The present sequence represents a peptide which can be used as the enzymatically cleavable linker in the drug conjugate of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a polymeric drug conjugate. The drug conjugate comprises biologically active agents conjugated via an enzymatically cleavable linker to a regular repeating linear unit comprising a water soluble polymer segment and a multifunctional chemical molety, or to a branched polymer comprising two or more water soluble polymer segments each bound to a common multifunctional chemical molety. The polymeric

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC comprising one or more single nucleic acid oligonucleotides (Comprising one or more single nucleotide polymorphisms (SNPs). ABB56531 CC comprising one or more single nucleotide polymorphisms (SNPs). ABB56531 CC to ABB5693 rappresent human peptides encoded by some of the SNP CC oligonucleotides. The sequences from the present invention can have common the compressive, cytostatic, antiinflammatory, neuroprotective and antimorphisms from the present invention can be used for treating a subject suffering from, at risk for, or suspected of, suffering from a cambiect suffering from, at risk for, or suspected of, suffering from a compatible processor of a sequence polymorphism. The compatible processor of a sequence polymorphism. The snps cc pathology may be autoimmune diseases, inflammation, cancer, diseases of the nervous system, and infection by pathogenic microorganisms. The SNPs cc are also useful for determining which forms of a characterised complymorphism are present in individuals. The antibodies may be used in cc the detection, quantitation and/or cellular or tissue localisation of a colymorphic protein (e.g., for use in measuring levels of the colymorphic protein within appropriate physiological samples).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cc use for preparing vaccines for preventing or treating Alzheimer's disease and other amyloid related disorders in humans. It is based cc on a portion of amyloid-beta peptide (see AABB262). Vaccines cc unnatural D-configuration maino acids to avoid the drawbacks of comparative or immunogenic. They preferably interact with a coperative or immunogenic. They preferably interact with a coperative or immunogenic. They preferably interact with a corresponding to region, the amyloid-beta peptide, or their class: I region of an amyloid protein, e.g. the beta-sheet region cc immunogenic fragments, protein conjugates, immunogenic derivative peptides and immunogenic peptidomimetics. Examples include all-D peptides corresponding to residues 1-40, 1-35, 1-28, 1-7. Cc 10-16, 16-21 and 36-42 of the amyloid-beta peptide and the all-D cc derivative peptides given in AABB2623-64. The vaccine clicits a corresponder of TH-1 response, preventing thrislogenesis and cc preferential TH-2 or TH-1 response, preventing thrislogenesis and cc preferential TH-2 or TH-1 response, preventing thrislogenesis and consisted callular toxicity. The amyloid related diseases may be consisted amyloidosis, e.g. diabetes type II, neurodegenerative classociated cellular toxicity. The amyloid related diseases may be consisted diseases, errapta, cerebral amyloid and prion protein confiction (e.g. tuberculosis) or chance inflammation (e.g. tuberculosis) familial Mediterranean fever (FRF) and cc systemic amyloidosis found in long-term haemodialysis patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                 The peptide was used to demonstrate a novel method of protein/peptide sequencing comprising sequentially degrading the peptide from the C terminus by aministering a vapour contg. perfluoroalkanoic acid and analysing the resultant reaction mixt. The process is simple and avousing enzymes or other complicated organic reagents. See also AAR32360-5.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             protein search, using sw model

    Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score
